

Zine (front) by Cordelia Scott (University of Kent)

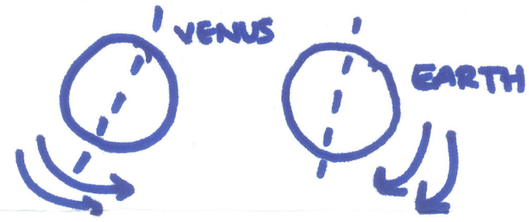

MERCURY...

One side always faces the Sun while the other always faces away.

VENUS...

Spins in the opposite direction to all the other planets

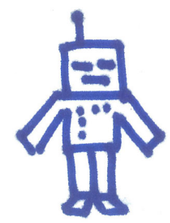

EARTH...

the only place in the Solar System where life exists

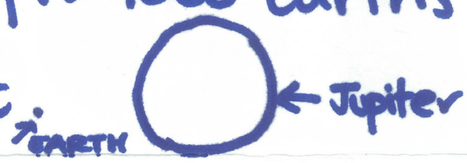

MARS...

is entirely populated by robots ... for now!

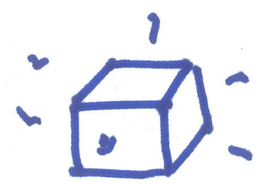

JUPITER...

is the largest planet in the Solar System. You can fit 1000 Earths inside it.

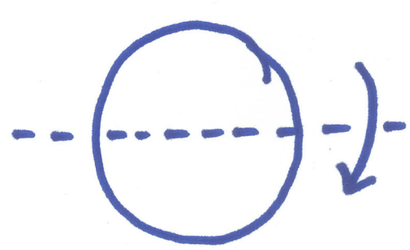

SATURN...

its rings are made of ice, rock and dust

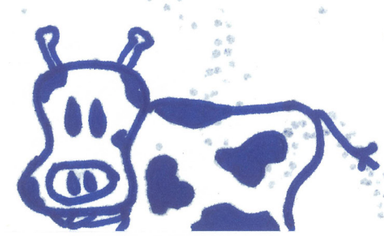

URANUS...

Spins on a horizontal axis

NEPTUNE...

is made of Methane so it smells like cow farts
